

VAÏVAE — “THE LIVING RUNWAY” website homepage Brief

An AI-powered, scroll-driven fashion organism

CORE IDEA

The homepage is a **liquid showroom or runway made of light and color**, where an **AI muse exists inside it**—not placed on top of it.

Apple style, muse intro

<https://www.instagram.com/reel/DW2IOSiEWfE/?igsh=MW1neWtycWdnYWZqNQ==>

She doesn't just wear the collection. She emerges from the brand world itself.

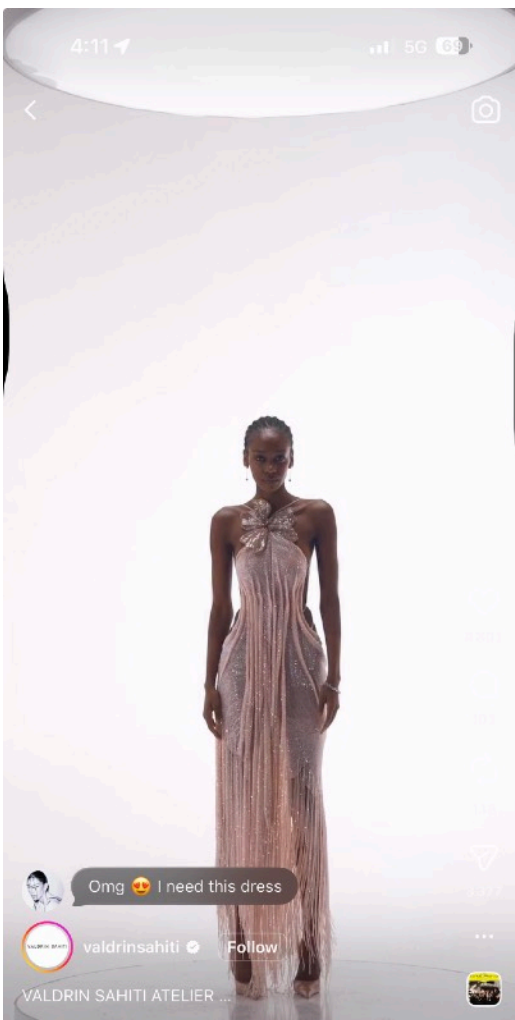

OPENING SCENE (0–3 seconds)

- Full screen: **molten gradient** (your red → orange → gold)
- The VAÏVAE logo appears blurred, almost melting
- Subtle movement: like heat waves

Then:

- A **silhouette forms inside the gradient**
- Slowly resolves into the **AI muse**

No hard cuts. Everything *grows into existence*

SCROLL EXPERIENCE (THE platform UNFOLDS)

As you scroll the muse turns and **zooms out evolving into a full body model (as reference 2)**

With lighting changing from the colorful liquid evolving background into a white studio light as picture below.

1. “FORMATION”

- As user scrolls:
- Gradient flows downward like liquid fabric
- The muse becomes clearer
- First outfit appears (minimal, soft look)

Motion

- Fabric edges slightly ripple
- Hair + body micro-movements (alive but controlled)

VAÏVAE

2. “TRANSFORMATION RUNWAY”

This is the core innovation.

Instead of switching sections:

The muse **turns in place**.

- Scroll = transformation trigger
- Outfit morphs:
- Brown → Blue → Salmon → Beige
- Fabrics *flow into each other*, not cut

AI Layer

- In-between frames generated using AI interpolation
- No “jumping” between looks

Background optional

- Colors follow the outfit:
- Blue look → cool airy gradient
- Brown → deep warm tones

Or background stays white

3. END OF SCROLL

- The muse stays back in full frame in Clean background.

Then:

- Minimal UI appears:
 - “Explore Look” or “Enter Collection”
-

INTERACTION DETAILS (THIS IS WHAT MAKES IT PREMIUM)

1. Scroll Physics

- Slight delay / inertia
 - Feels like pushing through liquid
-

2. Cursor Interaction

- Cursor creates **light distortion**
 - Like heat bending around it
-

3. Idle Behavior

If user stops:

- Muse breathes
 - Fabric subtly moves
 - Gradient continues *very slowly*
-

4. Sound (optional but powerful)

- Low ambient tone
- Slight shift when outfit changes

VAÏVAE

AI COMPONENTS (WHAT MAKES IT FUTURE-LEVEL)

1. AI Muse Generation

- Not one static model
- Slight variation each visit:
- Skin tone
- Facial structure
- Presence

Keeps brand feeling alive

2. Outfit Morphing

- AI-generated transitions between looks
- No traditional “image swapping”

3. Dynamic Color System

- Background colors adapt in real time to outfit tones

VISUAL LANGUAGE (BASED ON YOUR BRAND ASSETS)

Color

- Use your palette as **emotional states**, not static colors:
- Red → energy / entrance
- Orange → warmth / flow
- Yellow → highlight / focus
- Blue → calm / resolution

Typography

- Headlines: elegant serif (Kulchat vibe)
- UI: clean sans (Rugrats Sans style)

Logo Usage

- Appears:
- At start (fluid)
- At end (sharp, controlled)

— Symbolizes transformation → refinement —
